

Session 9 - Python Built-in Modules

Practice, Problems & Quiz

Practice & Problems

1. Find the square root of 121
2. Find the square root of 196
3. Find the square root of 400
4. Find 2^5 using `math.pow()`
5. Find 3^4 using `math.pow()`
6. Find 10^2 using `math.pow()`
7. Find the factorial of 5
8. Find the factorial of 7
9. Find the factorial of 8
10. Print `math.pi`
11. Generate a random number from 1 to 10
12. Generate a random number from 1 to 100
13. Generate a random number from 50 to 80
14. Choose a random color
15. Choose a random fruit
16. Choose a random day
17. Simulate a dice roll
18. Simulate a coin toss
19. Generate five random numbers
20. Generate ten random numbers
21. Ask the user for a number and print its square root
22. Ask the user for a number and print its factorial
23. Generate a lucky number
24. Create a random password digit
25. Generate a random month
26. Find area of a circle using `math.pi`
27. Generate three random colors
28. Generate three random fruits
29. Print square roots from 1 to 10
30. Create a lottery number generator

Quiz

1. What is a module?

2. Why do we use modules?
3. Which module contains `sqrt()`?
4. What is the output of `print(math.sqrt(49))`?
5. What is the output of `print(math.factorial(4))`?
6. Which function generates a random integer?
7. Which function selects a random item from a list?
8. What is the value of `math.pi`?
