

Student Name	Hajar Neazy Abdelmonem Ashour
Student / User ID	349471
Assignment Title	Freelance Pricing and Negotiation Plan
Session	Session 2: Developing a Pricing Structure Foundations & Developing a Pricing Structure - Packages and Negotiation

1. Price Calculation & Pricing Model

Time & Effort Estimate (for a standard 2000-word project)

- Translation: 6 hours
- Proofreading & quality check: 1.5 hours
- Client communication & delivery: 0.5 hours
- Total time: 8 hours

Business Costs (allocated per project)

- CAT tool / software subscription: 100 L.E
- Internet & electricity: 20 L.E
- Total business costs: 120 L.E

Rate, Profit & Total Price

Desired Hourly Rate: 120 L.E/hour

Labor cost = 8 hours × 120 L.E = 960 L.E

Profit Margin: 20% of (labor + costs) = 20% × 980 = 192

Total Project Price: 960 + 20 + 192 = 1172 (approx. 0.59 per word)

Selected Pricing Model: Per-Word Pricing

Per-word pricing is the industry standard for translation work, so clients immediately understand and trust it. It also scales fairly: a 500-word project and a 5000-word project are both priced proportionally to the actual work involved, which protects me from underpricing large jobs or overpricing small ones.

2. Service Packages

	Basic	Standard	Premium
Deliverables	Draft translation only	Translation + proofreading	Translation + proofreading + cultural/localization adaptation + terminology glossary
Timeline	5 business days	3 business days	2 business days (priority)
Revisions	None included	1 round included	2 rounds included

Price	0.5 L.E/word	1 L.E/word	2 L.E/word
Example (2,000 words)	1000 L.E	2000 L.E	4000 L.E

3. Response to Pricing Objection

"Your price is too high. Can you reduce it?"

Thank you for being upfront about this, I want to work with you within your budget. My pricing reflects the time I spend on accurate translation, proofreading, and quality checks, which is what protects your brand when it reaches Arabic-speaking customers. Rather than lowering the rate on the Standard package, I'd suggest the Basic package instead: you'd get the core translation at 1 pound/word, and we can add proofreading later if needed. That keeps quality intact while fitting your budget better.
